

To Whom It May Concern:

I am writing to you about the proposed legislation concerning the FCC and White Spaces for purchase.

My name is Jeff McGinnis and I am the audio engineer at the American Airlines Center in Dallas, Texas. This building is the home for the NHL Dallas Stars, NBA Dallas Mavericks, and the AFL Dallas Desperados. As an end user of wireless products, I am concerned about the proposals to reduce the number of available space to operate wireless devices, such as microphones and intercoms.

I have enclosed a list of frequencies used for our recent run to the NBA playoffs. Note between the DTV stations and users of wireless equipment for television broadcasts, there was virtually no space left for other wireless devices. If legislation proceeds to give these frequencies away it would have a tremendous impact on our everyday sporting events for the national television broadcasts, local media coverage, and the fans who attend the events.

I am not sure of what I can do, except to let others know who make decisions that if the decision to reduce the available spaces that end users have to operate wireless devices reduces, the product that you are accustomed to seeing on television, arenas, concerts, and houses of worship will have to cease. Please forward this to those who can help keep these white spaces available.

Thank you very much.

Jeff McGinnis
